

VIRAAJ SIVARAJU

Hyderabad, Telangana | saiviraaj9@gmail.com | +91-8754609107 | [linkedin.com/in/viraaj-sivaraju](https://www.linkedin.com/in/viraaj-sivaraju)

PROFESSIONAL SUMMARY

Senior Data Engineer with 10+ years of experience designing and implementing large-scale cloud-native data platforms and ETL/ELT pipelines. Proven expertise in migrating petabyte-scale enterprise data to cloud environments, with hands-on experience in Apache Spark, Airflow orchestration, and batch/streaming data processing. Strong foundation in data warehousing, data modelling, pipeline optimization, and performance tuning. Experienced in building secure, governed data frameworks with encryption, auditability, and monitoring. Proficient in Python, SQL, PySpark, and cloud-based data services. Seeking to leverage cloud migration expertise and data engineering skills.

TECHNICAL SKILLS

Cloud Platforms	Google Cloud Platform (GCP), AWS
Data Processing	Apache Spark (Core, SQL, PySpark), Python, SQL,
Orchestration	Apache Airflow (Cloud Composer), Workflow Automation, DAG Development
Data Warehousing	BigQuery, Oracle
Data Engineering	Performance Tuning, Pipeline Optimization, Data Quality, Monitoring & Alerting
DevOps & Tools	CI/CD, Git, IAM, Security & Governance, Encryption, Secret Management

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Wells Fargo | Nov 2021 – Present

Cloud Data Movement Platform (CDM Next)

- Architected and delivered end-to-end cloud-native data migration framework enabling enterprise-wide data movement from on-premises to cloud, supporting Teradata, Oracle, Hadoop/Hive, Kafka (streaming), and file-based sources
- Led design and implementation of configuration-driven ETL/ELT pipelines processing 15+ PB of enterprise data with adoption by 60+ application teams, accelerating data center exit strategy
- Independently owned Teradata-to-cloud data warehouse migration workflow including data ingestion, transformation, validation, performance optimization, and production support
- Developed and maintained Apache Airflow DAGs as orchestration backbone for batch data ingestion, automated retries, failure recovery, and job scheduling across distributed systems
- Implemented enterprise security and governance controls including IAM role-based access, data encryption at rest and in transit, secret management, and comprehensive audit logging for compliance
- Built centralized monitoring and alerting infrastructure using cloud-native logging and monitoring tools for end-to-end pipeline visibility, reducing incident response time by 40%
- Optimized pipeline performance through advanced techniques including partitioning strategies, caching, indexing, and parallel processing, improving data processing throughput by 60%
- Collaborated with cross-functional teams to define data quality standards, implement validation frameworks, and ensure data lineage and observability across the platform

Member of Technical Staff - 3 | Verizon | Oct 2019 – Nov 2021

Network Analytics & Reporting (NAR)

- Migrated legacy ETL workflows to Hadoop environment by designing scalable data pipelines and re-engineering code into PySpark reducing processing time by 50%
- Improved batch job performance through optimization techniques including efficient data storage formats (Parquet, ORC), parallel processing, and resource tuning, enabling faster report generation

- Contributed to architecture design of large-scale migration project involving multiple data sources and complex data transformations
- Designed and implemented data ingestion pipelines to extract structured and semi-structured data from various sources, supporting real-time analytics and business intelligence

IT Analyst | Tata Consultancy Services / May 2015 – Oct 2019

Enterprise Performance Management (EPM) – TCS Internal

- Developed Apache Spark-based ingestion jobs to extract HR and resource data from multiple sources and load into cloud storage following dimensional modelling best practices
- Implemented data transformations and business logic to generate KPIs for resource utilization, billing, and consumption analysis across global operations
- Built integrated reporting framework consolidating data from multiple trusted sources to enable executive decision-making across markets and service lines

Fault Handling System (FHS) – Telenor

- Developed data pipelines to manage network element malfunctions, process trouble tickets, and maintain network health monitoring systems
- Implemented logging and diagnostics framework for network failure detection and alerting, reducing mean time to resolution

CERTIFICATIONS

- GCP Professional Data Engineer
- AWS Certified Machine Learning – Specialty (Score: 970/1000)

ACHIEVEMENTS

- Awarded multiple Wells Fargo Spotlight Awards for delivering critical cloud data engineering solutions supporting enterprise data center exit and cloud modernization initiatives
- Received Verizon Spotlight Award for successfully managing multiple concurrent data migration projects and delivering high-impact analytics solutions
- Recognized with TCS Simple Thanks Award for migrating complex legacy ETL workflows to modern big data platform

EDUCATION

Bachelor of Technology (B.Tech) in Electronics and Communication Engineering

SASTRA University, Thanjavur | CGPA: 7.42/10 | 2011 – 2015
